

I am 70 yrs old and a retired .I like to travel in my car and I love to listen to xm radio and follow my tv cable stations while I am driving.I have no interference with advertisemets.and I can listen to anything I want especially my jazz,classsical pops etc.

I am one of first to have my xm put in my older car.At that time no car manufaturer was putting them in cars ,until much later. I also bought stock in the company,because I believed in the cause do much.

I am expeecting also dome day that they will connect this with the global positioning since the car phones still work on towers and I can not get help when in the mountains.I fell in a itch in the Ozarks and my phone had no signal bercause yhere were no towers locally.

This country is progressing to slowly with the technology we already have,and befor I die I want to see more of the tech world marvels.

We have to ,in this day and age of terrorism>Remember the terrorits are highly educated and will use all the technology they will.

sincerely      lucy bastasuki@aol.com
